Question: Suggestions for improvement

Understanding AI, whether generative or agentic, is the need of the hour. However, it is unrealistic to expect a thorough understanding of these technologies within just five days. They require considerable time, continuous learning, and practical experience to fully comprehend and effectively apply them in the administration of justice

the trainees must be given pro version at least during training period so that they be able to understand things as being taught during the lectures. The expiry of the token during the class made it imposible to grasp things for the participants at the level of academy. This is a suggestion that may be considered in the next training pls

Question: Suggestions for improvement

The training is super helpful, however, since, most of the judges dont have basic knowledge, so there should be refresher courses in order to provide judge with good and useful hand n experience.

Submitted: 23 Oct 2026, 11:18 AM

Question: Suggestions for improvement

The duration of the course was too short, as it primarily focused on practical exercises and hands-on usage, which require sufficient time for effective learning and practice. It is therefore suggested that the course duration be extended to two weeks, with the first week dedicated to familiarisation with the subject and its basic concepts, and the second week focused on practical exercises and hands-on application.

Submitted: 23 Oct 2026, 11:16 AM

Question: Suggestions for improvement

Here are suggestions you could put forward, grouped so they can go straight into a feedback form or a letter to the Director General.

1. Course design

Pre-training needs assessment. Survey participants beforehand on their IT comfort and court type (civil, criminal, family, execution), then form batches or breakout groups by level.
More hands-on time. Run at least half the sessions as supervised lab work on laptops, using actual tools rather than demonstrations.
Court-specific use cases. Build exercises around real judicial work: summarising pleadings and evidence, drafting framing of issues, preparing orders in execution and objection petitions, translating Urdu documents, and organising case chronologies.
Local-language component. Cover how the tools handle Urdu and Pashto documents, and where they fall short.

2. Ethics, risk and safeguards

Verification module. Give a dedicated session on hallucinated citations and fabricated case law, with a practical drill: check AI-generated references against PLD, SCMR, CLC and YLR.
Confidentiality. Provide clear guidance on what may and may not be entered into public AI tools, such as party names, sealed records and family or minor matters, and how to anonymise documents.
Judicial independence. Discuss where AI assistance ends and the judge's own reasoning must begin, and whether AI use should be disclosed in judgments or orders.

3. Institutional follow-up

Written guidelines or SOPs. Recommend that the Academy, with the Peshawar High Court, draft a short code on permissible AI use for the district judiciary, similar to guidance issued by courts in the UK, India and elsewhere.

Reference handbook. Issue a handbook or prompt library of tested prompts for common judicial tasks, updated periodically.
Refresher and advanced courses. Hold a one- or two-day follow-up after 3–6 months to address problems participants hit in actual use.
Peer network. Set up a WhatsApp group or forum where trained officers share experiences, and identify “AI focal persons” in each district to support colleagues.
Training of trainers. Train selected judicial officers so the programme can expand without relying only on outside experts.

4. Infrastructure and access

Tool access. Recommend that the High Court or Academy explore institutional licences or a secure in-house tool, so officers don’t depend on personal accounts for official work.
Integration. Look at linking AI with the existing case management system and digitised records.
Support staff. Extend basic training to readers, stenographers and clerks, who handle much of the drafting and record work.

5. Evaluation

Impact assessment. Measure whether training changed practice, through a short follow-up survey or by collecting examples of time saved, rather than relying only on end-of-course feedback.
Session-wise feedback. Gather feedback on each session to identify which trainers and modules worked best.
